

TOSHIBA

Leading Innovation >>>

CRS has teamed up with Toshiba Corporation to offer a unique combination of hardware and software to the hospitality industry. The beauty of this product is that it was designed specifically for small restaurant operators to take advantage of many of the capabilities usually offered on much larger POS systems. Included in this mail out are a brochure and a recent letter from a customer who originally hesitated to make an investment because he had been using simple electronic cash registers.

The Toshiba WinPos solution is affordable and reliable and backed by one of the largest corporations in the world. Our company (headquartered in Indianapolis) has been in business for over 33 years and is available to respond with on site support whenever it is needed.

If you are ready to stop the mistakes caused by handwritten checks or ready to improve the quality of service to your customers, give us a call for more information. Why settle for a generic internet based solution when one is available in your backyard at very competitive prices.

- *Delivery and driver assignment capability and accountability to eliminate costly errors*
- *Drive Thru capability with order recall and settlement from screen ensures accurate and fast customer accommodation*
- *Table management for full service restaurant with check tracking, tip accountability, and server settlement to totally eliminate handwritten kitchen guest checks*
- *Simplified item and ingredient inventory patterned after Panasonic schemes with screen icons for easier tracking and waste control*
- *No back office needed and full redundancy in each workstation means no lost data as long as one terminal is running*
- *Seamless high speed integrated credit with Mercury Payment Systems to dramatically improve the payment process*
